### PRINCIPAL'S MESSAGE:-

Philosophy of education is in existence since time immemorial. In ancient period, learners were going in search of knowledge and it was on 'Gurus' to accept them or not on the basis of their own norms of eligibility. After acceptance by Gurus, learners were scanned for their capabilities of using/applying knowledge for the mankind in the society. With the universalization of education system, each and every learner now pursues knowledge/skill at his or her doorstep.

Foundation to prepare future resource persons needs special attention in this technologically advanced world as overall this development is intended for better and comfortable lifestyle of the society. Interpersonal relationship and human values need to be at the core of education system. Knowledge alone can't be education. Behavioural changes of young minds is the essential element of education to face the forthcoming global challenge/s. Foundation of education needs paradigm shift towards learning environment and social values which are at alarming stage. Future citizens have to be nurtured with proper objective of inculcating the primary tasks on survival of the society. Importance of air, water, Earth, energy and space—environment conservation for the future generations must be inculcated among present generation.
